EDUCATION

NFC Institute of Engineering and Technology

Bachelor of Science in Software Engineering

Multan, Punjab

Sept. 2024 – Present

PROJECTS

Portfolio Website | *HTML, CSS, JavaScript, Responsive Design*

sh3hzad.vercel.app

- Designed and developed a fully responsive personal portfolio using **HTML, CSS and JavaScript**, focusing on clean UI and modern design principles.
- Implemented interactive features such as **typing animation, particle background effect and smooth navigation** to enhance user experience.
- Showcased projects, skills and education in a structured layout with **mobile-first responsiveness** and optimized performance.
- Integrated **GitHub, LinkedIn and email links** and deployed the website using **Vercel** for fast and reliable hosting.

Sales Data Dashboard | *Microsoft Excel, Data Visualization*

[GitHub](#)

- Created a professional Excel dashboard to transform raw sales data into meaningful business insights
- Used charts, formulas and data visualization techniques for performance analysis
- Designed an organized and user-friendly layout for efficient reporting and decision-making
- Improved data tracking and analytical reporting using Microsoft Excel tools

Password Security and Authentication System | *React, TypeScript, Tailwind CSS, WebCrypto API, bcryptjs* [GitHub](#)

- Built a password security dashboard for strength analysis, hashing and attack simulations
- Implemented SHA-256 and bcrypt demonstrations using WebCrypto API
- Simulated brute-force and dictionary attacks with entropy-based crack-time estimation
- Designed a fully client-side system for real-time security analysis

School Website | *HTML, CSS, Responsive Design*

[GitHub](#)

- Developed a fully responsive school website for The Flower's School to create a modern digital presence showcasing academic programs, admissions, faculty and contact details in a structured and user-friendly interface
- Designed a premium UI using HTML5 and CSS3 with glassmorphism effects, smooth animations and a professional color theme (navy blue, pink and red).
- Implemented responsive layouts using Flexbox and CSS Grid to ensure optimal performance across mobile, tablet and desktop devices.
- Focused on clean UX design with interactive navigation, reusable components and visually appealing sections for better user engagement.
- Built a lightweight, fast-loading static website optimized for deployment on platforms like Vercel and Netlify.

ShopSphere – Full-Stack E-Commerce Platform | *React, Node.js, Express.js, MongoDB, JWT*

[GitHub](#)

- Developed a full-stack e-commerce platform using the MERN stack with secure JWT-based user authentication.
- Implemented product browsing, shopping cart, order management and inventory administration features.
- Built RESTful APIs for product, user and order management with MongoDB as the database.
- Designed a responsive user interface to provide a seamless shopping experience across desktop and mobile devices.

Sphere – Mini Social Media Platform | *React, Node.js, Express.js, MongoDB, JWT*

[GitHub](#)

- Built a full-stack social media application enabling users to create profiles, publish posts, like and comment.
- Implemented secure authentication and authorization using JWT.
- Developed REST APIs with Express.js and MongoDB for efficient data management.
- Designed a responsive interface that delivers a smooth user experience across devices.

TaskFlow – Real-Time Project Management Platform | *React, Node.js, Express.js, MongoDB, Socket.IO* [GitHub](#)

- Developed a collaborative project management platform using the MERN stack and Socket.IO for real-time communication.
- Implemented Kanban boards with drag-and-drop task management and live synchronization.

- Added comments, file attachments and instant notifications to improve team collaboration.
- Designed a secure and responsive interface optimized for collaborative workflows.

RuleBot – Python Rule-Based Chatbot | *Python*

[GitHub](#)

- Developed a rule-based chatbot in Python that responds to user queries using predefined conversational rules and keyword matching.
- Implemented logical decision-making and pattern-matching techniques to simulate natural conversations without machine learning.
- Designed modular conversation flows for easy maintenance and future feature expansion.
- Demonstrated core chatbot development concepts, including input processing, response generation and conversational flow management.

PredictWell – AI-Powered Employee Burnout Prediction System | *Python, Machine Learning*

[GitHub](#)

- Developed a machine learning application to predict employee burnout using historical workforce data and predictive analytics.
- Performed data preprocessing, feature selection and model training to improve prediction accuracy and reliability.
- Generated actionable insights through data visualization to support informed decision-making.
- Designed the system with a scalable workflow for future integration of additional datasets and predictive models.

CERTIFICATIONS

Certificate in Computer Applications (CCA) | *TEVTA*

[Certificate](#)

- Demonstrated foundational proficiency in computer applications including MS Office, basic IT concepts and digital productivity tools.

Cyber Security Job Simulation Certificate | *Deloitte.*

[Certificate](#)

- Gained practical experience in cybersecurity investigations, log analysis, threat detection and incident response through real-world simulation exercises.

Data Analyst Job Simulation Certificate | *Deloitte.*

[Certificate](#)

- Analyzed industrial telemetry data to identify operational inefficiencies across multiple factory locations. Imported and structured nested JSON datasets into Tableau Public, building interactive dashboards including *Down Time per Factory* and *Down Time per Device Type* bar charts. Successfully identified **daikibo-factory-seiko** as the facility with the highest downtime, providing actionable insight for operational decision-making.

Technology Job Simulation Certificate | *Deloitte.*

[Certificate](#)

- Completed a virtual job simulation focused on technology development and coding practices within a consulting context.
- Drafted a professional proposal outlining the design and implementation of a data dashboard to support business decision-making.

Software Engineering Job Simulation Certificate | *WELLS FARGO*

[Certificate](#)

- Designed a financial portfolio management system by gathering requirements, modeling data through an Entity Relationship Diagram (ERD), and implementing it using IntelliJ, with the final project published to GitHub.

Advance Software Engineering Job Simulation Certificate | *Walmart USA*

[Certificate](#)

- Successfully completed Walmart's Advanced Software Engineering Virtual Experience Program through Forage. Worked on practical software engineering tasks involving Java, data structures, UML design and database modeling.
- Designed scalable system components and solved real-world engineering challenges similar to those encountered by Walmart's software engineering teams.

TECHNICAL SKILLS

Languages: Java (OOP), C, Python, JavaScript (ES6+), SQL, HTML5, CSS3

Frontend: React, Responsive Web Design

Backend: Node.js, Express.js, REST APIs, JWT Authentication, Socket.IO

Databases: MongoDB, MySQL

Developer Tools: Git, GitHub, VS Code, Vercel

Design & Productivity: Figma, Canva, Microsoft Excel
